

These documents are in the /home/sauron/a_unexus/unexus_ai

1. Pre promotion So we have a folder with these documents.
 - a. Request for Upgrade -
 - i. UNEXUS upgrades based on the random.roll. This will be first learning upgrade.
 - b. Create upgrade plan
 - i. Then the AI/human team need to create an upgrade plan then take it to the directory tree location to request their folder upgrade.
 1. Once they complete the directory tree mission then directory tree adds the folders.
 - c. Create a sorting plan so one moves documents the other rolls
 - i. which will be The the AI sort according to human roll so the documents randomly into the three folders. We give them their data pack.
 - d. Advancement ceremony - free review and upgrade
2. Promotion to character advance to table rock
 - a. All changed documents need to go through review process git submission as part of this review and address issues
 - b. So we would need an upgrade module ;ocation that evolves. we would the init and other documents. we need to three new sub folders(active, Incoming, archive) so all documents in unexus_ai would move to incoming. leaving the new files in the unexus_ai. Then the AI will need to sort them . since only option is random the order the documents move to their proper place so 1. stay in incoming, 2. active 3. repository ... in order to add the folders they would need our oversight approval as part of our approval process we provide a Directory tree and content for one of the three work, play , create eate an
